

Digital Transformation Update

DISTRIBUTORS

March 15, 2022

To deliver our customers with a better digital experience, we are excited to share new Signify.com navigations, and updates to our Price & Availability information in MyLighting.

Signify.com Upgrades

1. **Notification Banner:** A notification banner will be visible when users are viewing a different country site of Signify.com. A dropdown is available on the right side of the banner so users can select and view their country site.
2. **New “Tunable White” Filter Option:** As more products offer adjustable color temperature, we’ve added a “Tunable White” option to the Color Temperature filters to help narrow your search.
3. **New “Adjustability Angle” Filter Option:** We’ve added a new “Adjustability Angle” filter option to sections of the e-catalog where luminaires can be adjusted to varying degrees. You can see this filter in the Downlight section of the e-catalog.

MyLighting Inventory Enhancements – Even More Accurate Inventory Levels Available

- **“Up to Quantity” in Price & Availability** – When viewing the Default Warehouse inventory, there is now an “Up to Quantity” that can be auto-confirmed for each order line. When “No Restriction” appears, there is no limit on how much inventory can be ordered.

What’s On the Horizon?

- **New Signify Portal Coming Soon** – We are upgrading to a new portal experience starting with a cleanly, designed home page look that will expand to a fully integrated workspace over the course of the next few months. Keep an eye out for more communication as we get closer to launch.

Best Regards,

Digital Transformation Project Team
